# READY-MADE DOCX CONTENT (Copy into Word)

## COVER PAGE

**HOTSTAR CLONE**
**VIDEO STREAMING WEB APPLICATION**

**Project Report**

**Developer:** Roshan
**GitHub:** roshan-j55/hotstar_clone
**Framework:** Django 6.0.4
**Language:** Python
**Database:** SQLite3

**Date:** April 2026

*(Insert Page Break)*

## 1. INTRODUCTION

The Hotstar Clone is a full-stack web application developed to replicate the core functionality and user experience of a modern OTT streaming platform. The project demonstrates backend logic, database modeling, template rendering, and media handling using the Django framework.

This project serves as a practical implementation of real-world streaming platforms and helps in understanding full-stack development.

## 2. OBJECTIVE

- To develop a functional video streaming web application
- To implement database-driven content management
- To design a modern and responsive UI
- To apply Django MTV architecture
- To practice version control using Git and GitHub

---

## 3. TECHNOLOGY STACK

**Backend:** Python, Django 6.0.4
**Frontend:** HTML5, CSS3
**Database:** SQLite3
**Media Storage:** Django MEDIA_ROOT
**Admin Panel:** Django Admin
**Version Control:** Git, GitHub

---

## 4. SYSTEM ARCHITECTURE

The project follows the Django MTV (Model-Template-View) architecture:

- User sends request
- URL routes to view
- View interacts with model
- Data passed to template
- Response returned to user

---

## 5. PROJECT STRUCTURE

```
hotstar_clone/
│
├── core/
├── templates/
├── models.py
├── views.py
├── urls.py
├── settings.py
├── media/
├── manage.py
```

---

## 6. DATABASE DESIGN

### 6.1 Category Model

- id (Primary Key)
- name

### 6.2 Video Model

- id (Primary Key)
- title
- description

- category (Foreign Key)
- thumbnail
- video_file
- created_at

**Relationship:** One Category → Many Videos

---

## 7. MODULE DESCRIPTION

### 7.1 URL Routing

- `/` → Home page
- `/video/<id>/` → Video detail page

### 7.2 Views

- Fetch all videos
- Fetch single video using ID
- Handle errors (404)

### 7.3 Templates

- **base.html** → Main layout
- **home.html** → Video grid
- **video_detail.html** → Video player

---

## 8. FEATURES

- Video catalog display
- Video playback system
- Admin upload functionality
- Category organization
- Responsive design
- Animations and hover effects
- Error handling

---

## 9. LIMITATIONS

- No user authentication
- No search functionality
- No adaptive streaming
- SQLite not scalable
- No CDN

- No payment system

---

## 10. FUTURE SCOPE

- User login and registration
- Search and filtering
- Cloud storage integration
- HLS video streaming
- Payment gateway integration
- Recommendation system
- REST API development

---

## 11. HOW TO RUN THE PROJECT

```
git clone https://github.com/roshan-j55/hotstar_clone.git
cd hotstar_clone
python -m venv venv
venv\Scripts\activate
pip install django pillow
python manage.py migrate
python manage.py createsuperuser
python manage.py runserver
```

---

## 12. VERSION CONTROL

- Tool: Git
- Platform: GitHub
- Branch: main
- Files tracked: 19
- Ignored: db.sqlite3, media/, .env

---

## 13. CONCLUSION

The Hotstar Clone project successfully demonstrates the development of a video streaming web application using Django. It covers important concepts such as architecture design, database management, and frontend integration.

This project provides a strong foundation for building scalable OTT platforms with advanced features in the future.

---
